
Agriculture Knowledge

Admin guide: how to publish content

Everything on the site is created and released from the **Admin** area. This guide covers the whole route: signing in, setting up exams and topics, writing an article, adding a YouTube lesson, building a quiz, and putting any of it in front of readers.

One rule runs through all of it: **nothing you create is visible until you publish it**. Everything is saved as a draft first, so there is no way to expose half-finished work by accident.

Signing in

1. Go to <https://agriculture-knowledge.vercel.app/login> and sign in with your admin email and password.
2. An **Admin** link appears in the header once you are signed in. Open it, or go straight to <https://agriculture-knowledge.vercel.app/admin/materials>.

If the Admin area says “Admins only”

You are signed in, but that account is not an admin. Admin access is granted by email on the server, not from inside the site — ask whoever runs the deployment to add your address, then sign out and back in.

The four tabs

Tab	What it is for
Dashboard	Counts of users, material, comments and quiz attempts. A health check, not a place you edit anything.
Material	The main workbench. Every article, video and quiz, with its status, and the buttons that publish, unpublish and archive.
Exams	The exams learners filter by — ICAR JRF, IBPS AFO, and so on.
Topics	The subject tree. Topics nest, so <i>Soil Science</i> can hold <i>Soil Fertility</i> .

First: set up exams and topics

Material is tagged with exams and topics, and you can only tick boxes that already exist. Ten minutes spent here once saves re-editing every article later.

Adding an exam

1. Open the **Exams** tab.
2. Type the exam name — for example **ICAR JRF** — and, if you like, a one-line description.
3. Press **Add**. The web address is generated from the name.

Adding a topic

1. Open the **Topics** tab.
2. Type the topic name, for example **Soil Science**.
3. Leave **Parent topic** empty for a top-level subject. To make a sub-topic, choose its parent — *Soil Fertility* under *Soil Science*.
4. Press **Add**.

Topics are shared, exams are lists

The same topic tree serves every exam. Tag an article with the topic it is about and every exam it is relevant to — one article on soil pH can belong to several exams at once. You are not creating a copy per exam.

Publishing an article

1. **Material** tab → **New article**.
2. **Title**. Required. This becomes the heading and the web address.
3. **Summary**. One or two sentences. It is what readers see on the home page, on cards and in search results, so write it for someone deciding whether to click.
4. **Level**. Beginner, Intermediate or Advanced.
5. **Topics** and **Exams**. Tick as many as apply. Both may be left empty — see the note below.
6. **Body**. Write in the editor. The toolbar gives you Bold, Italic, two heading levels, bullet and numbered lists, quotes, code and links.
7. Press **Save draft**. You land back on the Material list with the article marked **DRAFT**.
8. When it reads the way you want, press **Publish** on that row.

You can publish before you have decided on tags

Topics and exams are both optional. An article with no tags still publishes and still appears on the home page — it simply will not show up under an exam or topic filter. Add the tags whenever you are ready; the article does not need to be unpublished first.

Formatting is cleaned against a safe list when you save, so pasted text from Word or a web page may lose styling the editor cannot express. The words always survive; check the result after pasting a long passage.

Adding a video lesson

1. **Material** tab → **New video**.
2. Fill in title, summary, level, topics and exams exactly as for an article.
3. Paste the **YouTube link**. Any shape works — a normal watch link, ayoutu.be short link, an embed link, a Shorts link, or the bare eleven-character video id.
4. The player appears below the box as soon as the link is understood. **Watch that preview**: it is the video your readers will get.
5. Press **Save draft**, then **Publish** from the Material list.

“That does not look like a YouTube link yet”

The Save button stays disabled until a valid video is recognised. It is almost always a truncated copy or a link to a channel or playlist rather than a single video. Open the video on YouTube, use Share → Copy link, and paste that.

Building a quiz

A quiz is created in two stages: the settings first, then the questions. A quiz with no questions cannot be attempted, so the site takes you straight from one to the other.

Stage one — the settings

1. **Material** tab → **New quiz**.
2. Title, summary, level, topics and exams, as before.
3. **Pass mark (%)**. The percentage a learner needs to pass. 60 is the default.
4. **Time limit**. In minutes. Tick **No time limit** for untimed practice.
5. **Shuffle** presents the questions in a different order to each learner.
6. Press **Create and add questions**.

Stage two — the questions

Add a question gives you one blank question at a time: the question text, the options, a tick on the correct one, marks, optional negative marks, and an optional explanation shown after the attempt.

For a whole set at once, press **Paste in many** and paste plain text in this shape:

```
Q: Which nutrient is most affected by soil pH?
*Phosphorus
Carbon
Silicon
E: Availability drops sharply outside pH 6 to 7.
```

```
Q: What does CEC stand for?
*Cation exchange capacity
Crop establishment coefficient
```

- A **blank line** separates one question from the next.
- An **asterisk** marks the correct option. Every question needs at least two options and exactly one asterisk.
- The **E:** line is the explanation, and is optional.
- Marks default to 1 and can be edited afterwards in the form.

Press **Add these**. Any problems are listed all at once rather than one at a time, so fix them together and paste again. Imported questions join the form, where you can still edit them — then press **Save**.

Save, then publish

Saving the questions does not publish the quiz. Go back to **Material** and press **Publish** on the quiz row. **Export as text** on the question screen gives you the same paste format back — a quick way to keep a backup or reuse a set.

Publish, unpublish, archive

Every row on the Material list carries a status. Use the two filters at the top of the list — status and format — to find things quickly once there is a lot here.

Status	Who can see it	How you get there
DRAFT	Only admins.	Everything starts here. Unpublish returns a live item to draft.
PUBLISHED	Everyone, including signed-out visitors.	Publish on the row.
ARCHIVED	Nobody. It is hidden but not deleted.	Archive on the row.

Archive rather than delete

Archiving keeps the row, so the likes, comments and quiz attempts that point at it stay intact. Use **Unpublish** for something you are fixing and will put back; use **Archive** for something that is finished with.

Before you press Publish

- The **summary** is filled in — it is the first thing a reader sees.
- The **level** matches the content.
- At least one **topic** and one **exam** are ticked, unless you deliberately mean to leave it untagged for now.
- For a video: the **preview plays the right video**.
- For a quiz: the questions are **saved**, each has exactly one correct answer, and the pass mark and time limit are what you intended.
- For an article: any pasted text still reads correctly after the formatting clean-up, and links open the right pages.

Common questions

I published something by mistake.

Press **Unpublish** on that row. It returns to draft immediately.

Can I edit something that is already published?

Yes. Publishing is a status, not a lock. For a large rewrite, unpublish first so readers do not meet the work in progress.

The topic or exam I want is not in the list.

Add it on the **Topics** or **Exams** tab, then reopen the material form — the lists are loaded when the form opens, so a form left sitting open will not show something added since.

Nothing appears on the home page.

The home page shows published material only. Set the status filter on the Material tab to **Drafts** to see what is waiting.
